	Product	400G QSFP-DD transceiver OQ serials	Ver.	001
	Part No.	OQQS3414	Rev.	000
			Page	2 / 13

1. Features

- ◆ QSFP-DD MSA compliant
- ◆ 4 Narrow LAN-WDM lanes MUX/DEMUX design
- ◆ Up to 40km transmission on single mode fiber (SMF)
- ◆ 8x53.125Gb/s electrical interface (400GAUI-8)
- ◆ Data Rate 106.25Gbps (PAM4) per channel.
- ◆ Maximum power consumption 14W
- ◆ Duplex LC connector
- ◆ RoHS compliant
- ◆ Operating case temperature: Standard: 0 to +70°C

2. Applications

- ◆ Data Center Interconnect
- ◆ 400G Ethernet
- ◆ Infiniband interconnects
- ◆ Enterprise networking

3. Description

The OCRECOM's OQQS3414 is a 400Gb/s Quad Small Form Factor Pluggable-double density (QSFP-DD) optical module designed for 40km optical communication applications. The module converts 8 channels of 50Gb/s (PAM4) electrical input data to 4 channels of Narrow LAN-WDM optical signals, and multiplexes them into a single channel for 400Gb/s optical transmission. Reversely, on the receiver side, the module optically de-multiplexes a 400Gb/s optical input into 4 channels of WDM optical signals, and converts them to 8 channels of 50Gb/s (PAM4) electrical output data.

The central wavelengths of the 4 narrow LAN-WDM channels are 1304.58nm, 1306.85nm, 1309.14nm, and 1311.43nm as members of the narrow LAN-WDM wavelength grid defined in IEEE802.3ba. It contains a duplex LC connector for the optical interface and a 76-pin connector for the electrical interface. To minimize the optical dispersion in the long-haul system, single-mode fiber (SMF) has to be applied in this module. It can support up to 40km on SMF.

The product is designed with form factor, optical/electrical connection and digital diagnostic interface according to the QSFP-DD Multi-Source Agreement (MSA) Type 2. It has been designed to meet the harshest external operating conditions including temperature, humidity and EMI interference.

The module incorporates 4 independent channels on narrow LAN-WDM channels are 1304.58nm, 1306.85nm, 1309.14nm, and 1311.43nm center wavelength, operating at 100G per channel. The transmitter path incorporates a quad channel EML driver integrated in the DSP and EML lasers together with an optical multiplexer. On the receiver path, an optical de-multiplexer is coupled to a 4 channel APD array. A DSP basis gearbox is used to convert 8 channels of 25GBaud PAM4 signals into 4 channels of 50GBaud PAM4 signals and also an 8-channel retimer. The electrical interface is compliant with IEEE 802.3bs and QSFP-DD MSA in the transmitting and receiving directions, and the optical interface is compliant to IEEE 802.3bs with duplex LC connector.

A single +3.3V power supply is required to power up this product. All the power supply pins are internally connected and

OCRE COMMUNICATION LIMITED Web: www.ocrecom.com E-Mail: sales@ocrecom.com Add. Dist.A, Building 6, Bay on the six block, Xixiang, Baoan Dist, Shenzhen, China 518000 Tel: + 86 755 2335 3855 Fax: + 86 755 2335 3855	DESIGN	CHECK	CHECK	APPROVAL

			Page	3 / 13

should be applied concurrently. As per MSA specifications the module offers seven low speed hardware control pins (including the 2-wire serial interface): ModSelL, SCL, SDA, ResetL, InitMode, ModPrsL and IntL.

Module Select (ModSelL) is an input pin. When held low by the host, this product responds to 2-wire serial communication commands. The ModSelL allows the use of this product on a single 2-wire interface bus – individual ModSelL lines must be used.

Serial Clock (SCL) and Serial Data (SDA) are required for the 2-wire serial bus communication interface and enable the host to access the memory map.

The ResetL pin enables a complete reset, returning the settings to their default state, when a low level on the ResetL pin is held for longer than the minimum pulse length. During the execution of a reset the host shall disregard all status bits until it indicates a completion of the reset interrupt. The product indicates this by posting an IntL (Interrupt) signal with the Data_Not_Ready bit negated in the memory map. Note that on power up (including hot insertion) the module should post this completion of reset interrupt without requiring a reset.

Initialize Mode (InitMode) is an input signal. It is pulled up to Vcc in the QSFP-DD module. The InitMode signal allows the host to define whether the QSFP-DD module will initialize under host software control (InitMode asserted High) or module hardware control (InitMode deasserted Low). Under host software control, the module shall remain in Low Power Mode until software enables the transition to High Power Mode, as defined in the QSFP-DD Management Interface Specification. Under hardware control (InitMode de-asserted Low), the module may immediately transition to High Power Mode after the management interface is initialized. The host shall not change the state of this signal while the module is present. In legacy QSFP applications, this signal is named LPMMode. See SFF-8679 for LPMMode signal description.

Module Present (ModPrsL) is a signal local to the host board which, in the absence of a product, is normally pulled up to the host Vcc. When the product is inserted into the connector, it completes the path to ground through a resistor on the host board and asserts the signal. ModPrsL then indicates its present by setting ModPrsL to a “Low” state.

Interrupt (IntL) is an output pin. “Low” indicates a possible operational fault or a status critical to the host system. The host identifies the source of the interrupt using the 2-wire serial interface. The IntL pin is an open collector output and must be pulled to the Host Vcc voltage on the Host board.

4. Absolute Maximum Ratings

It has to be noted that the operation in excess of any individual absolute maximum ratings might cause permanent damage to this module.

Parameter	Symbol	Min	Max	Unit	Note
Storage Temperature	TST	-40	85	°C	
Relative Humidity(non-condensing)	RH	5	85	%	
Operating Case Temperature	TOPC	0	70	°C	
Supply Voltage	VCC	-0.5	3.6	V	
Damage Threshold, each Lane	TH _d	-2.4		dBm	

5. Operating Environment

Parameter	Symbol	Min	Typical	Max	Unit	Note
Operating Case Temperature	TOPC	0		70	°C	
Power Supply Voltage	VCC	3.13	3.3	3.47	V	
Power dissipation		-		14	W	
Aggregate Bit Rate	BR _{AVE}		425		Gbps	PAM4
Lane Bit Rate	BR _{LANE}		106.25		Gbps	PAM4
Link Distance with G.652	D	0.002		40	km	

Additional attenuation required to support short distance, make sure the receiver input power not exceed the overload point or damage the Receiver(APD)

6. Optical Characteristics

All parameters are specified under the recommended operating conditions with PRBS31 data pattern unless otherwise specified.

Transmitter

Notes:

1. GND is the symbol for signal and supply (power) common for the QSFP-DD module. All are common within the module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal common ground plane.

2. VccRx, Vcc1 and VccTx, VccRx1, Vcc2 and VccTx1 are the receiving and transmission power suppliers and shall be applied concurrently. Recommended host board power supply filtering is shown in Figure 4 below. VccRx, Vcc1 and VccTx, VccRx1, Vcc2 and VccTx1 may be internally connected within the module in any combination. The connector pins are each rated for a maximum current of.

10. Mechanical Dimensions

ESD

This transceiver is specified as ESD threshold 1KV for high speed data pins and 2KV for all others electrical input pins, tested per MIL-STD-883, Method 3015.4 /JESD22-A114-A (HBM). However, normal ESD precautions are still required during the handling of this module. This transceiver is shipped in ESD protective packaging. It should be removed from the packaging and handled only in an ESD protected environment.
